Cognimatics TrueView People Counter® support in iOS Viewer for AXIS cams

The developers at EyeSpyFX have enabled support for Cognimatics TrueView People Counter® in their latest version of the "Viewer for AXIS cams."

Download the "[Viewer for AXIS cams](#)" today and view your People Counter® statistics in real time from your iOS device.

To see your TrueView People Counter® statistics and live video image you simply download the application to your iOS device and it will find your Axis cameras in your network.

Enter a camera that has the Cognimatics TrueView People Counter® installed on it. When you click on the camera, you will see the RED Cognimatics icon appear in the feature list. When this icon appears, it means that the app has detected the presence of Cognimatics TrueView People Counter® ACAP application. Follow the link to bring up the counter statistics.

The screenshot shows the app interface on an iPhone. The top status bar shows 'Telenor SE' and the time '09:33'. The app has a navigation bar with 'Options', 'All', and 'Add Cam'. Below the navigation bar is a camera feed showing a person walking on a staircase. To the right of the camera feed is a statistics table. Below the table is a 'Done' button.
